

Image 1: Brain MRI in sagittal T1 (A), axial T2 (B), SWI (C), DWI (D), ADC (E) sequences. Extra-axial nodular image, in relation to the posterior margin of the right orbit, showing heterogeneous signal on T2 with flow void and liquid areas, hypointense on SWI and restriction in diffusion, observing the relationship it has with the internal carotid artery on T1 (A). Interpreted as partially thrombosed giant aneurysm of the ICA.
